

# FSLogix Apps Agent Components

There are five main components of the Agent. The command-line utility, service, two drivers, and the IE Browser Helper Object.

All of these components are installed in the main application installation directory at `C:\Program Files\FSLogix\Apps`.

- **Command Line (frx.exe)**  
The command-line utility lets you manage rules.
- **Service (frxsvc.exe)**  
The service communicates with the command-line, communicates with the driver, and monitors the Rule folder for changes.
- **frxdrv.sys Driver**  
The driver handles file system and registry requests to make the hiding and redirection work.
- **frxdrvvt.sys Driver**  
The driver provides the advanced redirection capabilities for the [Profiles Containers](#) and [Office 365 Containers](#) products.
- **IE Browser Helper Object (frxlauncher.exe, frx\_plugin\_\*.dll)**  
The FSLogix Apps browser helper object is necessary for Java virtualization.
