

Java Version Control

Instructions for getting Java Version Control working quickly can be found in the [Java Version Control - Quick Start](#) guide.

FSLogix Apps Java Version Control provides the ability to change the version of Java that is used by Internet Explorer. It also allows certain applications to use a specific version of Java depending on what the program requires.

Requirements

FSLogix Java Rule Editor

The Java Rule Editor is a GUI application and must be installed separately. It facilitates the customization and creation of rule files. The rules are then saved as `.xmlp` files and can be applied to influence Internet explorer and/or other programs.

Troubleshooting
