

Java Rule Editor

You can create rules to configure an application or website to use a specific version of Java. Java rules are created using the Java Rule Editor.

Installation

Run the correct `FSLogixAppsJavaRuleEditorSetup.exe` depending on your platform (32-bit or 64-bit).

The Java Rule Editor only needs to be installed on one computer to create your rule sets. It doesn't even need to be installed on a persistent machine. Any administrator can simply install it on demand to create the rules, and then save the rule files to a different location.
