

Java Version Control - Quick Start

This guide is intended to provide the most basic steps required to get the FSLogix Java Version Control feature functioning.

1. Ensure you are installing on a [supported platform](#). Windows 7+ and Windows Server 2008 R2+ (32 bit and 64 bit) are supported.
2. [Install](#) the FSLogix Agent
The distribution zip file contains 32 and 64 bit versions of **FSLogixAppsSetup.exe**. Choose the appropriate installer for your platform.
3. Install the FSLogix Apps Java Rule Editor. It can be found in the same folder as the FSLogix Agent.
4. Create a new rule set

- a. Open the Rule editor and select the **Add Icon**  (Alternatively, Edit > Add)
- b. Select the type of rule, either **URL** or **Application**.
- c. Enter the URL or the Path of what you want the rule applied to.

 The Asterisk can be used to signify a match of any string.

- d. Select the **Java Version**, FSLogix will automatically find the versions installed and provide the choices in a drop down menu.

 **Selecting the latest version of Java in the Java Version Field**

When the latest version of Java is selected in the Java Version Field, The Java Version control and associated features are effectively disabled for the given URL.

5. Save the Rule Set  and press the Generate button  to create all the necessary files.
6. Save the Rule set and [deploy](#) in order to see it take effect.
